

SUITABILITY OF WHITE RUBBER W39778 FOR FOOD CONTACT APPLICATIONS

The compound W39778 is formulated in compliance with the guide lines set out SAA MP52-2000 and AS 3720 – 1988 which determines the suitability of materials for contact with potable water. To comply with these requirements Non Metallic materials are to be certified as suitable by a number of organisations, one being the Food and Drug Administration, U.S.A [FDA]. It is not feasible to have each individual rubber compound or products manufactured for them to be specifically tested for FDA status. However, selecting rubber compound ingredients are used in FDA regulated applications which deal with particular end uses.
